

HelloTalk Now Boasts Robust Grammar Checker and Offers New HelloKorean Course

HelloTalk, the popular global language-learning app for iOS and Android, announces a new English Grammar Checker feature and offers new HelloKorean Course.

AURORA, OHIO – November 20, 2019 – Renowned social mobile language learning app developer, HelloTalk, Inc., today announced a new English Grammar Checker feature for its popular HelloTalk language learning app, as well as new HelloKorean courses.

HelloTalk's new English Grammar Checker feature works by gathering a daily 50,000 HelloTalk data records which are then analyzed from approximately 20 million correction histories generated by users to create this useful feature. This information collection helps HelloTalk's artificial intelligence (AI) understand sentences before and after correction. The AI then identifies each grammatical error and correction information with machine learning to present the correct grammar to the user. HelloTalk's English Grammar Checker is the world's first AI grammar checking feature that improves correction quality with its robust and innovative self-learning capabilities.

Additionally, HelloTalk offers new HelloKorean course for \$119 USD. HelloKorean are podcast-style language lessons between two instructors, giving users a deeper understanding of Korean culture and language through interactive discussions. Other HelloLanguage Courses are available in English, Japanese, French, Spanish, Italian, Russian, Arabic, and Portuguese. In addition, HelloTalk offers Live Class, which allows multiple users to join a small class and interact with the teacher directly through audio discussions and PowerPoint presentations. With English Tutor 1-on-1, users can practice their English anytime, anywhere, with more than 1,000 native English-speaking tutors. With hundreds of topics, users can find a topic that interests them the most and adapt it to their learning level.

The HelloTalk app works by using its own algorithm to best match language partners who are studying each other's language to bring language-learning into real time. For example, a native Chinese speaker learning German will be matched with a native German speaker learning Chinese. Therefore, both users can give each other mutual help in their respective native language via HelloTalk's chat screen. Users can interact with a large community of learners through the HelloTalk Moments page by publishing posts. Language partners can teach each other by providing corrections in chats or on posts so that users can get communal feedback. While viewing posts and chatting, users can translate message to their native language as well as transliterate them to learn the pronunciations. There is also a voice-to-text feature which helps users get a better understanding of voice messages, which is also convenient if users are in a noisy location or prefer to read the message.

"We're very proud of HelloTalk's new English Grammar Checker feature," said HelloTalk founder and CEO, Zackery Ngai. "Grammar Checker dramatically enhances the way HelloTalk users learn English, and once again positions HelloTalk

far ahead of its competitors in terms of the ease of language learning and the number of languages from which they can learn.”

HelloTalk’s more than 16 million users hail from almost 200 countries around the world, with 20% from China, 13% from Japan, 12% from Korea, 8% from the USA, 4% from Russia, 6% from Brazil, and the remaining 37% from a variety of countries around the world. Among the 16 million plus users, the most learned and practiced languages include English (58%), Japanese (12%), Korean (12%), Chinese (4%), Spanish (4%), and French (4%). Other popular languages learned and practiced with HelloTalk include German, Italian, Russian, and Arabic. In all, HelloTalk supports more than 120 languages from around the globe.

HelloTalk is available for the iPhone and iPad at Apple’s App Store:
