Contentgrabber – Tool for Translators

Preparation of websites texts for translation with a few clicks

The Contentgrabber-Tool can easily be used to copy the content of websites and then upload it again as a translated version. This unique solution developed by PeoplePlanetProfit saves valuable time and money.

For translators, the preliminary work for translating texts might be laborious sometimes. Especially when the texts are not offered neatly prepared by the client, thus, e.g. copying all website texts page by page that has to be translated takes long time.

For that case PeoplePlanetProfit has developed the Webgrab Contentgrabber Tool that allows translators to copy the content of websites with a few mouse clicks and save it e.g. as xml file. Subsequently, the file can be translated with any translation program and uploaded again – easy and time-saving.
