

Czech Flashcard app Vocabulary Miner makes vocabulary learning brilliantly simple

The vocabulary-building app Vocabulary Miner created by studio SKOUMAL is based on the popular Flashcard System and customized algorithm. It promises the user to simply say more with every word and delivers it through effective, yet simple vocabulary training without ads and even offline. It provides an open database of more than 500 000 miscellaneous Word lists in many languages covering levels from A1 to C2. The synchronized web app facilitates the fast creation of own vocabulary and enables import & export of words in .csv and .pdf.

“I felt like there was always something missing in the other vocabulary apps. We would like to inspire people with Vocabulary Miner to build up their own personal vocabulary to be confident in day-to-day situations,” Vladislav Skoumal, the founder of SKOUMAL studio says.

The Flashcard System forces users to actively recall words from memory. Vocabulary Miner tailored special Word lists for travelers and expats that are available under keywords “expat” and “#saymore” in the app. *“Anyone who has ever been to a foreign country knows how confusing it can feel in the streets without knowing a word in the native language. Learning just basic vocabulary already helps overcome the fear of speaking and prevents misunderstandings,”* Zuzana Pápayová, the project coordinator of Vocabulary Miner, explains.

Highlights:

- Offline learning
- Many topics, levels, languages
- Spaced repetition algorithm
- Statistics for every Word List
- 7 language settings - *English, Czech, Slovak, Polish, French, Spanish, German*
- Create your own vocabulary list
- Import/export via Web App and real-time synchronization with the app
- Works on all devices
- Nice design
- Publish vocabulary for others
- All ready-to-use vocabulary lists
- Word Lists created by translators
